MAGNESIUM CHLORIDE REMOVER

FEATURES AND BENEFITS
MAG. CHLORIDE REMOVER is a highly concentrated car wash soap. MCR can be used in self serve or full service washes. In addition to removal of magnesium chloride, MCR will safely remove stubborn dirt and road grime.

RECOMMENDED USE
MAG CHLORIDE REMOVER is manufactured for use in self serve and fully automatic car washes. MCR also should be used as a pre-soak during winter months when magnesium chloride is being applied to roads.

APPLICATION
MAGNesium CHLORIDE REMOVER works extremely well with high pressure. Apply as a pre-soak and let product dwell for a minute or two. When heavy applications of mag. chloride have been applied to the roads, some scrubbing of wheels may be necessary. Use a wash mitt or soft brush on any painted surface.

SPECIAL NOTES
MCR contains fortified surfactants and is high in alkalinity, therefore it must be diluted properly. Start with a dilution rate of 90:1 and up to 200:1.

PACKAGING
MCR is available in 5 gallon pails and 15, 30, and 55 gallon drums.
